DUAL HOPPER

FT2200

The Horizon FT2200 dual hopper is designed to seamlessly deliver granular product to either the PPX planter or the SPX Strip-till cultivator.

The FT2200 utilises a pressurised hopper, powerful fan (turbine), 2 metering systems and high capacity piping so it can handle large volumes of product. The metering systems utilise the same technology as the Horizon DSX so the operator can enjoy very accurate seeding, market leading functionality and the ability to quickly change from metering either one product or two different products. or fertiliser implements.
